

# HostBridge Documentation

Welcome to the HostBridge Documentation Wiki. Here you can find everything you need to know about how to install, configure, use and troubleshoot HostBridge.

This is the place you come to first when you need to know about HostBridge. At the bottom of most pages are comment sections. If something is unclear or insufficient please let us know there and we will fix it.

Please note a new link to the right of this block ([tools.hostbridge.com](https://tools.hostbridge.com)). This link will lead you to a new site where we describe, among other things, how to generate a JavaScript object from a COBOL copybook, generate a screen/field object, and send files we request from you to us depending on their size.

Another new link is HostBridge Code Share. This link connects you to tips and suggestions for executing certain tasks within the HB.js and other environments.

Finally, there is now a mobile app which will allow you to access the HostBridge Support site from your mobile device. You can find the instructions to do this in the next column.

**Open a support ticket by email:** [support@hostbridge.com](mailto:support@hostbridge.com)

**Open a support ticket by web:** [support.hostbridge.com](https://support.hostbridge.com)
